

WEBSPHERE APPLICATION SERVER V8.5.5 ADMINISTRATION

Lab Notes

WAS V8.5.5 Administration Lab Notes

- Lab Init: VM with existing disk
- Additional dependency for exercise 15

LAB INIT

- Start the **VirtualBox** application.
 - Use menu **Machine > New** for creating the virtual machine.
 - Provide the following settings:
 - Name: **was85host**
 - Type: **Linux**
 - Version: **RedHat 64bit**
 - Memory size: **4096 MB**
 - Hard disk: **Use an existing virtual hard disk file**
and specify the path to your vmdk file
-

LAB INIT

Name and operating system

Name:

Type: 

Version:  

Memory size

 MB

4 MB 8192 MB

Hard disk

☐ Do not add a virtual hard disk

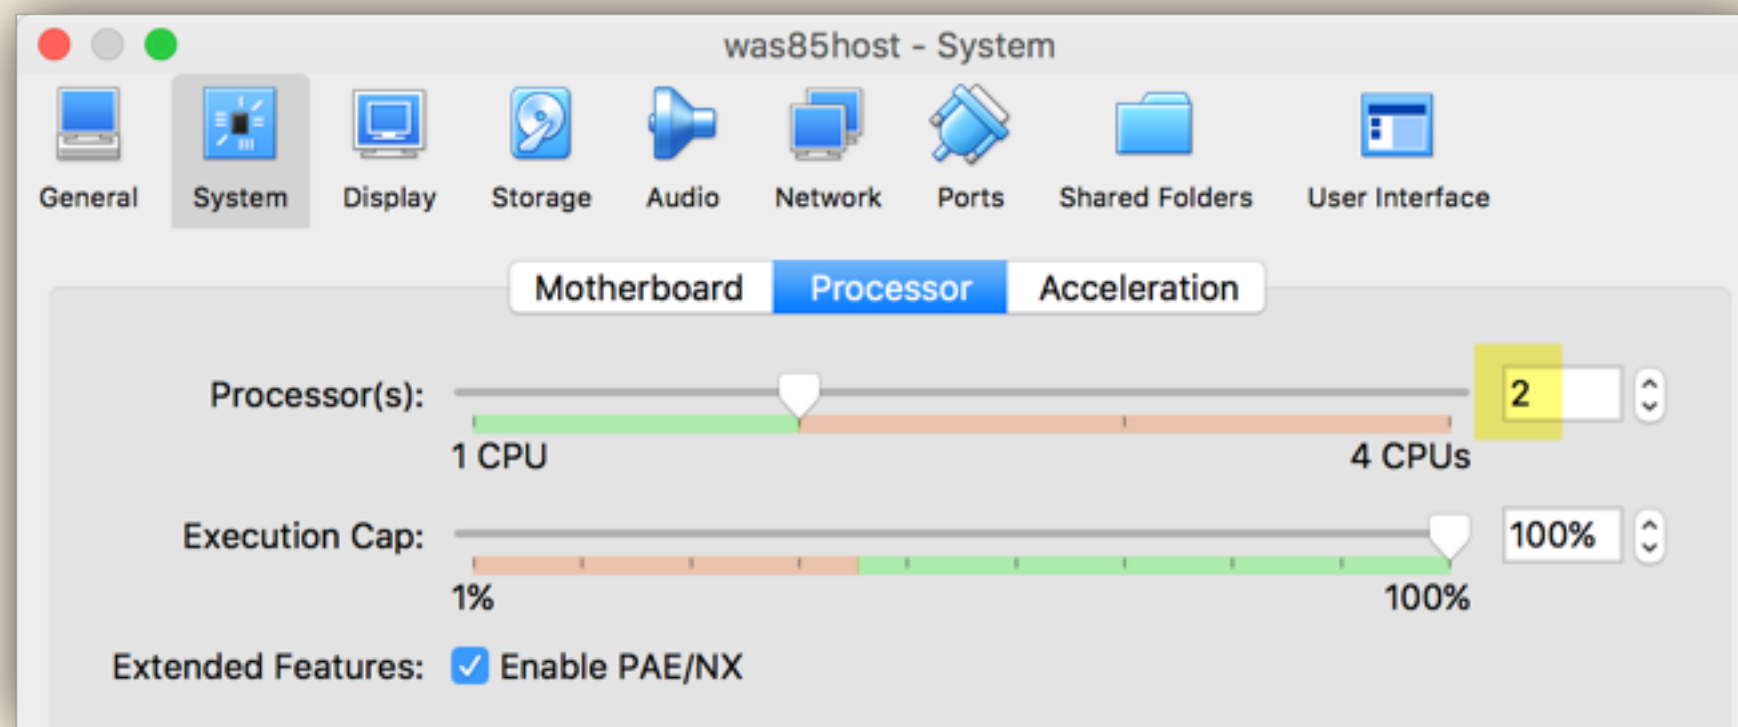

☐ Create a virtual hard disk now

☒ Use an existing virtual hard disk file

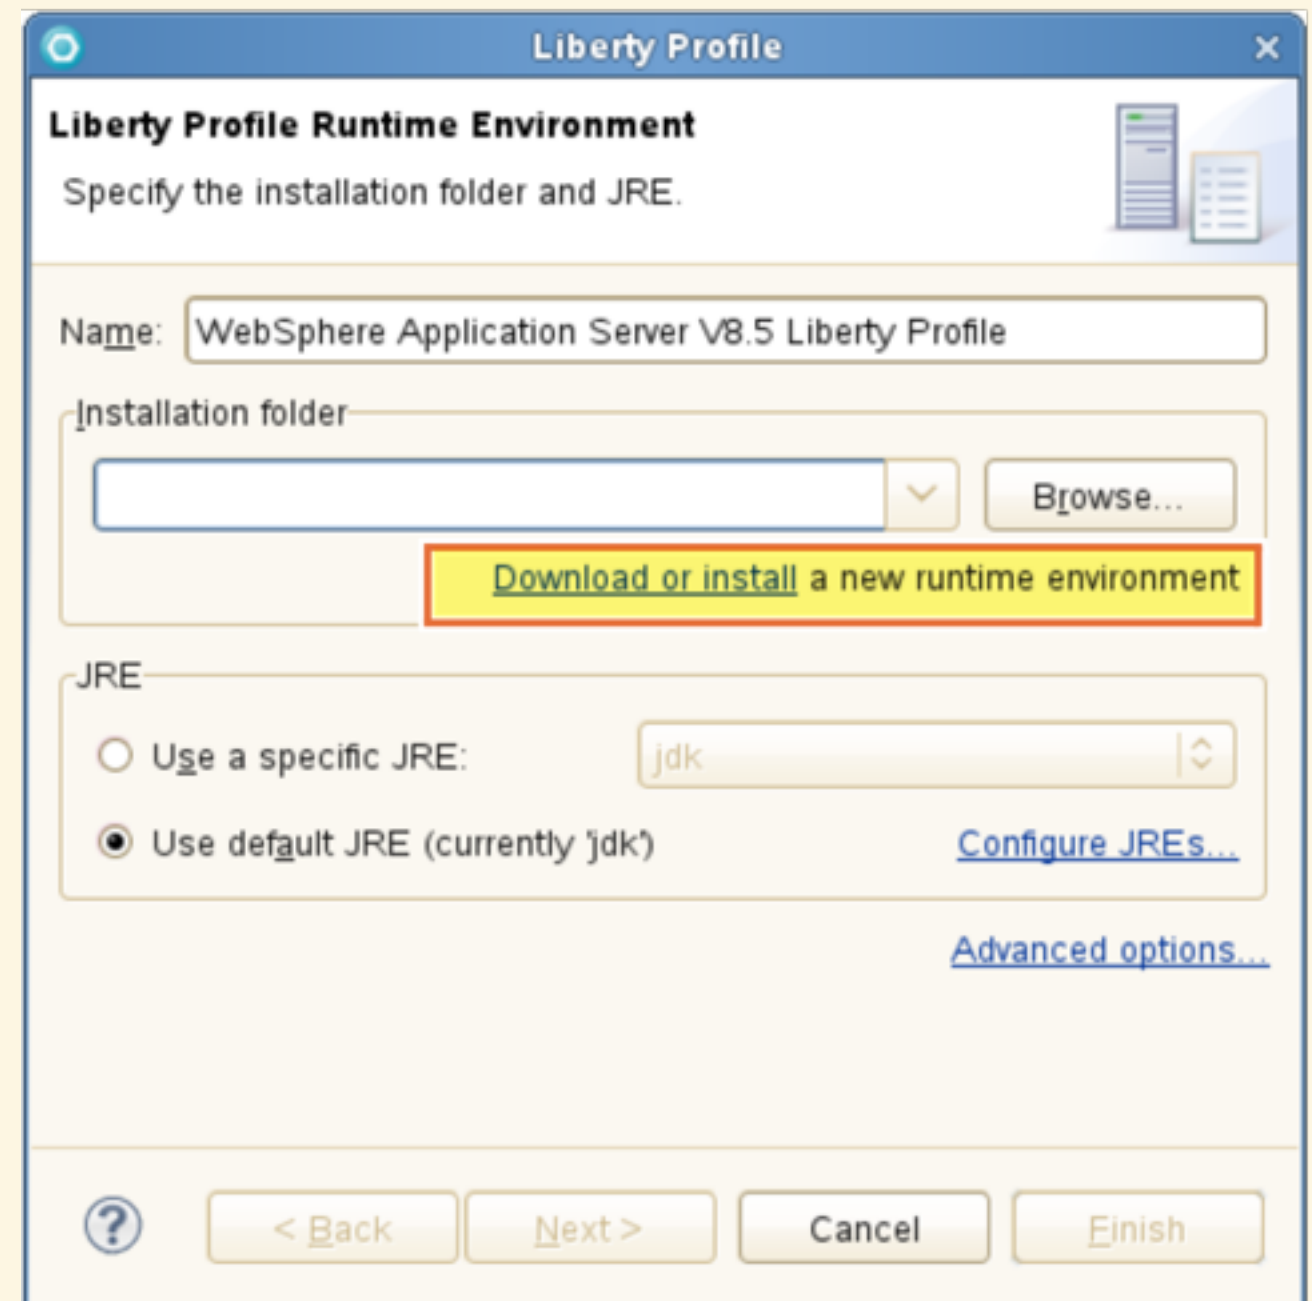

LAB INIT

- After VM creation, go to **Settings** and set at least 2 cores for CPU.

ADDITIONAL DEPENDENCY FOR EXERCISE 15

- IADT throws an error when clicking **Download or install** link on page 15-7.
- As described on [this technote](#), Eclipse 3.6.x releases need an older XULRunner package.
- And this VM comes with IADT 8.5.1 which is based on Eclipse 3.6.3.

ADDITIONAL DEPENDENCY FOR EXERCISE 15

- Download XULRunner 1.9.2.28.
- Install it locally.
 - Open the Terminal application, go to (using `cd`) the location where you downloaded the archive and run the following commands:

```
# bzip2 -d xulrunner-1.9.2.28pre.en-US.linux-x86_64.tar.bz2  
# tar xf xulrunner-1.9.2.28pre.en-US.linux-x86_64.tar  
# mv xulrunner /usr/lib/xulrunner-1.9.2.28pre
```

- Set MOZILLA_FIVE_HOME environment variable.
 - In the existing Terminal window, run:

```
# export MOZILLA_FIVE_HOME=/usr/lib/xulrunner-1.9.2.28pre
```

ADDITIONAL DEPENDENCY FOR EXERCISE 15

- In the existing Terminal window, you can run IADT using:

```
# /opt/IBM/SDP/eclipse
```

- In order to persist the previous environment variable during logins, add the following line at the end of `/root/.bash_profile` file:

```
export MOZILLA_FIVE_HOME=/usr/lib/xulrunner-1.9.2.28pre
```
